

## Nano Ceramic Energy Saving Film

We are a factory located in Taiwan with 30 years' manufacturing experience of heat insulation product for automotive and artificial. With our Nano Ceramic Slurry technology, we raise up the heat insulation data of window solar film and reaches to high visible light with high heat insulation.

Our Energy Saving Film can block high IR (heat), UV (Ultraviolet) and allow high VLT (visible light) transfer through the window. With installing the Energy Saving Film, it can keep the inside bright without turning on the light and eliminate the air conditioning using time to reduce wasting of power.
